Welcome to Messenger Dashboard Support!

Hi there! I am your real-time assistant powered by Gemini. Ask me anything!

12:36

give me a css animations

12:42

I'd be happy to help! Depending on what you are building for your dashboard or web app, different types of animations serve different purposes. Here are **four essential, production-ready CSS animations** commonly used in live dashboards: a **Smooth Fade & Slide-In** (for cards/modals), a **Live Status Pulse** (for active connections/nodes), a **Loading Spinner** (for data fetching), and an **Attention Shake** (for alert notifications).

1. Smooth Fade & Slide-In (Great for Cards, Alerts, or Widgets) This gives elements a sleek entrance as they load onto the dashboard. ##### HTML: ````html <div class="fade-in-card"> <h3>Live Metrics</h3> <p>Data updated just now.</p> </div> ```` ##### CSS: ````css .fade-in-card { background: #ffffff; padding: 20px; border-radius: 8px; box-shadow: 0 4px 12px rgba(0, 0, 0, 0.05); /* Animation Property */ animation: fadeInUp 0.6s ease-out forwards; } @keyframes fadeInUp { from { opacity: 0; transform: translateY(20px); /* Starts 20px lower */ } to { opacity: 1; transform: translateY(0); /* Slides up to original position */ } } ```` ---
2. Live Status Pulse (Great for Connection Indicators) Perfect for real-time dashboards showing if a service, server, or WebSocket connection is active. ##### HTML: ````html <div class="status-container"> System Online </div> ```` ##### CSS: ````css .status-container { display: flex; align-items: center; gap: 8px; font-family: sans-serif; } .pulse-dot { width: 12px; height: 12px; background-color: #10b981; /* Green */ border-radius: 50%; /* Infinite Pulse Effect */ animation: pulse 2s infinite; } @keyframes pulse { 0% { transform: scale(0.95); box-shadow: 0 0 0 rgba(16, 185, 129, 0.7); } 70% { transform: scale(1); box-shadow: 0 0 10px rgba(16, 185, 129, 0); /* Fades outward */ } 100% { transform: scale(0.95); box-shadow: 0 0 0 rgba(16, 185, 129, 0); } } ```` ---
3. Lightweight Loading Spinner (Great for Data Refreshing) A clean, lightweight spinner without needing extra libraries. ##### HTML: ````html <div class="spinner"></div> ```` ##### CSS: ````css .spinner { width: 40px; height: 40px; border: 4px solid rgba(0, 0, 0, 0.1); border-left-color: #3b82f6; /* Blue accent */ border-radius: 50%; animation: spin 1s linear infinite; } @keyframes spin { from { transform: rotate(0deg); } to { transform: rotate(360deg); } } ```` ---
4. Subtle Attention Shake (Great for Errors or Alerts) Trigger this animation when a user makes an error or a critical threshold is met. ##### HTML: ````html <button class="alert-button shake">Critical Alert</button> ```` ##### CSS: ````css .alert-button { padding: 10px 20px; background-color: #ef4444; color: white; border: none; border-radius: 6px; cursor: pointer; } /* Apply this class dynamically when an error triggers */ .shake { animation: shake 0.5s ease-in-out; } @keyframes shake { 0%, 100% { transform: translateX(0); } 20%, 60% { transform: translateX(-6px); } 40%, 8`
12:42

greate now give me 3 css animation and html and also put the `<style></style>`tag for css part so give me just code

12:45

````html <!DOCTYPE html> <html lang="en"> <head> <meta charset="UTF-8"> <meta name="viewport" content="width=device-width, initial-scale=1.0"> <title>3 CSS Animations</title> <style> /* Base Page Styling */ body { font-family: 'Segoe UI', Tahoma, Geneva, Verdana, sans-serif; background-color: #0f172a; color: #ffffff; display: flex; flex-direction: column; align-items: center; justify-content: center; min-height: 100vh; gap: 60px; margin: 0; } .demo-box { display: flex; flex-direction: column; align-items: center; gap: 15px; } /* ===== 1. GLOWING PULSE BUTTON ===== */ .pulse-btn { padding: 16px 36px; font-size: 16px; font-weight: 600; color: #ffffff; background-color: #6366f1; border: none; border-radius: 50px; cursor: pointer; box-shadow: 0 0 0 rgba(99, 102, 241, 0.7); animation: pulse 1.8s infinite; } @keyframes pulse { 0% { transform: scale(0.95); box-shadow: 0 0`
